SENIOR SOFTWARE ENGINEER

Dec. 2016 - PRESENT

Work in Cross Site Applications team to develop website backend and support the front end features for multiple teams within the organization. I use Java, Spring, Hibernate, Struts, SOAP/Rest API and develop Java based web services and applications. I work with Javascript, HTML, JQuery and FreeMarker template engine to aid development of the front end applications. I work on software design and development to streamline authentication and authorization process, profile maintenance and render secure network for online community. My projects have involved the following:

- Design and deployment of a dependable authentication service across the servers.
- Built and deployed overall service infrastructure utilizing Docker container, CircleCI, and several AWS stack(Including EC2, ECS, Route 53, S3, CloudFront, RDS, ElastiCache, IAM), focusing on high-availability, fault tolerance, and auto-scaling.
- Developed an easy-to-use Payment module which connects to major PG(Payment Gateway) companies in Korea.
- Adding caching mechanism for logging in to enhance performance and reduce database access latency.
- Implementing security measures to prevent brute force login attacks. Imposing account lockout scheme to deter a brute force attack.
